For immediate release: 13 April 2005

Plant Health Care wins contract to restore former coal mine sites to forested land in Wyoming

Plant Health Care plc ("PHC" or the "Company"), the leading supplier of natural products for plants and soil, has been awarded a Professional Services Contract for a three-year abandoned mine land reclamation project in the State of Wyoming. The contract has a minimum value of \$510,000 but it is expected that the total revenues could be significantly greater over the 3 year period. Over 200 abandoned coal mine sites will be reclaimed to create farm land, parks and other green spaces.

PHC Reclamation, Inc. ("PHC-REC"), the Company's wholly owned reclamation subsidiary, has been contracted by the Department of Environmental Quality/Abandoned Mine Land Division ("AML") to provide professional engineering and design services for a number of abandoned coal mine sites which pose hazards to public health and safety, or constitute an environmental hazard. The primary areas of concern consist of abandoned coal mines located in the Sheridan, Johnson, Campbell, Weston and Crook Counties of Northeast Wyoming.

PHC-REC has a well-known reputation as one of the foremost land reclamation companies in the United States and for excellence in engineering, design, and construction management, and was the 2004 recipient of the coveted People's Choice Award for best national reclamation project presented by the United States Department of the Interior, Office of Surface Mining. Since 1997 PHC-REC has successfully restored over 10,000 acres of abandoned land including 26 sites in the State of Wyoming.

Turnover for PHC-REC for the year ended 31 December 2004 was in line with forecasts. Revenue from this contract will commence during 2005 and is expected to continue for the following 3 years.

CEO of PHC, John Brady added: "We are proud of the work we have done in Wyoming, Utah and Montana over the past seven years and we are confident that this project will be as successful as those before it. The Reclamation business is one of our main sectors and we will continue to look for opportunities in other areas of the United States and also in Europe. The market for land reclamation is worth billions of dollars in the US alone and PHC is well positioned to capture an increasing market share."

About PHC

Plant Health Care plc is a leading provider of natural products for plants and soil. Established in 1995 in Pittsburgh (Pennsylvania) in the United States, PHC currently has approximately 60 employees and has operations in the US, Mexico, UK, Spain, and the Netherlands with technical support in Austria. The Group has two principal operating subsidiaries in the US - PHC Inc (PA) and PHC-REC. The Company listed on the AIM market of the London Stock Exchange in July 2004.

PHC's products are aimed at the horticulture, agriculture, turf grass, commercial landscaping, forestry and land reclamation industries and are both environmentally beneficial and on the whole more cost effective than synthetic chemical alternatives. Through the commercialisation of these products, PHC is capitalising on current long-term trends toward natural systems and biological products for plant care and soil and water management uses.

PHC-REC is an environmental and reclamation engineering consulting firm which provides engineering and design services for reclamation lands disturbed by mining, construction, and other activities. PHC-REC are the recognized leader in the use of biologically based solutions using mycorrhizal fungi and bacteria for the establishment of trees, shrubs, and grasses on these disturbed lands. PHC-REC was established in 1997 to exploit PHC's products and technology.
