Plant Health Care plc
("PHC" or "the Company")

Pre-Tect launched into US market

[Following press speculation,] Plant Health Care, the leading provider of natural products to the green industry is pleased to announce the roll-out of its plant growth product, Pre-Tect into the US market following its successful launch in the UK.

The Company has received extremely positive results from recent tests of its Pre-Tect shelf life extension product on California lettuce. On the basis of these results PHC has entered into discussions with one of the largest US grocery chains about incorporating the product as a standard in the growing practices of its suppliers. PHC currently has a similar arrangement with one of the UK's largest grocery chains.

John Brady CEO of Plant Health Care commented, "The launch of Pre-Tect into the US, which has consistently demonstrated the ability to increase shelf life in produce, will allow us to immediately establish a strong presence in the American produce growing markets."
