PLANT HEALTH CARE PLC
(“Plant Health Care” or “the Company”)

- *Bayer CropScience moves forward with second year of Myconate[®] tests* -

Plant Health Care (AIM: PHC.L), a leading provider of natural products for plants and soil, announces that following the 2007 trial results, Bayer CropScience has confirmed that it will move forward with the second year of Myconate[®] testing. Bayer CropScience will be making a milestone payment to Plant Health Care for the continuation of the cooperation into the second year. Financial details were not disclosed.

Bayer CropScience, the global leader in seed treatment products, offers a broad portfolio of high-quality products to combat pests and fungal diseases. Plant Health Care’s Myconate[®] technology is known to help crops to develop larger root mass through the stimulation of naturally occurring mycorrhizal fungi, which in turn often leads to improved yields and enhanced stress resistance. Both companies are collaborating on the further development of Myconate[®] as a seed treatment product in corn, soybean, cotton and sunflower on a worldwide basis.

Commenting, John Brady, Chief Executive of Plant Health Care said: *“We are excited that Bayer CropScience has elected to move forward with the development and trial programme and we look forward to working with them to further develop the commercial potential of Myconate[®].”*

-Ends-
